

```
1 ▾ /*****
2 Develop a Java program to create an abstract class named Shape that contains two integers and
3 an empty method named printArea( ). Provide three classes named Rectangle, Triangle and
4 Circle such that each one of the classes extends the class Shape. Each one of the classes contain
5 only the method printArea( ) that prints the area of the given shape.
6 *****/
7 import java.util.Scanner;
8 ▾ abstract class shape{
9     double a,b;
10     abstract void printArea();
11 }
12
13 ▾ class rectangle extends shape{
14 ▾     void getdata(double x, double y){
15         a=x;
16         b=y;
17     }
18
19 ▾     void printArea(){
20         System.out.println("Area of rectangle = " + (a*b));
21     }
22 }
23
24 ▾ class triangle extends shape{
25 ▾     void getdata(double x, double y){
26         a=x;
27         b=y;
28     }
29
30 ▾     void printArea(){
31         double area = 0.5*a*b;
32         System.out.println("Area of triangle = " + area);
33     }
34 }
35
```

```

36 class circle extends shape{
37     void getdata(double x){
38         a=x;
39     }
40
41     void printArea(){
42         double area = 3.14*a*a;
43         System.out.println("Area of circle = " + area);
44     }
45 }
46
47 public class Main
48 {
49     public static void main(String[] args) {
50         Scanner scan = new Scanner(System.in);
51         int ch;
52         rectangle r = new rectangle();
53         triangle t = new triangle();
54         circle c = new circle();
55         System.out.print("\n1. Rectangle\n2. Triangle\n3. Circle\nEnter your choice: ");
56         ch = scan.nextInt();
57         System.out.println();
58         switch(ch){
59             case 1: System.out.println("Enter length and breadth: ");
60                 double l = scan.nextDouble();
61                 double b = scan.nextDouble();
62                 r.getdata(l,b);
63                 r.printArea();
64                 break;
65
66             case 2: System.out.println("Enter base and height: ");
67                 double b1 = scan.nextDouble();
68                 double h = scan.nextDouble();
69                 t.getdata(b1,h);
70                 t.printArea();
71                 break;
72

```

```
72
73     case 3: System.out.println("Enter radius: ");
74         double r1 = scan.nextDouble();
75         c.getdata(r1);
76         c.printArea();
77         break;
78
79     default: System.out.println("Invalid Input");
80 }
81 }
82 }
```

1. Rectangle

2. Triangle

3. Circle

Enter your choice: 1

Enter length and breadth:

2 3

Area of rectangle = 6.0

...Program finished with exit code 0

Press ENTER to exit console.
